

Harvesting the Future.
Job start opportunities.

CLAAS |||

Grow with us.

Agricultural technology is one of the most essential economic sectors in the world because it feeds our population. Ensuring exactly this for the future is our ambition at CLAAS.

Therefore, not "any old job" awaits you in our family owned company – but the challenging task of paving the way for ever increasing harvests worldwide through innovative technology. More than 11,000 employees are engaged in this task in 140 countries; talented people from all professions, who make their daily contribution towards feeding the world. You do not necessarily need to have specific knowledge in agricultural technology if you are interested in joining us in this exciting world of work. If you do have some knowledge, all the better. Above all, we look forward to your curiosity for a branch of the future in an international field, interesting people, foreign cultures and the many diverse opportunities for your personal career. If you can bring this curiosity, you will find CLAAS to be a fertile ground for a long, versatile career.

Your Start at CLAAS

Your application	26
------------------	----

A driving force in the world's fields.

A professional field with a future.

There are very few companies that have influenced the development of agricultural technology, and also agriculture itself, as much as CLAAS has. What started in 1913 with the manufacture of powerful straw binders has become a leader on the global market: CLAAS is one of the world leaders in the production of agricultural technology. We are the European market leader in combine harvesters and world market leader for self-propelled harvesters. Our tractors, balers and forage harvesting machines also hold top positions in agricultural technology worldwide. This is supported by the most state-of-the-art information technology. Machine-to-machine communication, intelligent networking, the improvement of the harvesting process as a whole – Industry 4.0 is already our reality and sustainability is our principle. Our products ensure efficiency in agricultural production and they go easy on natural resources as they continuously reduce energy consumption.

Innovation right from the beginning.

Right from the start, CLAAS focused its company strategy on innovation. Again and again, solutions from CLAAS still set standards in quality and efficiency. The driving force here is the people who use their know-how and passion for agriculture worldwide to benefit our customers and our company. Many remain Claasians all their working lives – because they value our character as a family business, because they can develop further with us and are always given new perspectives. You can count on these benefits from the very beginning, too.

The Claas brothers were real pioneers who have shaped agriculture significantly with their ideas and visions. Can you imagine the world without combine harvesters, where the harvest must still be brought in by hand? Not really. And that, of course, is not the only innovation from CLAAS.

A milestones review:

1913–1929: It all began with the knotter.

The technical reliability of the CLAAS knotter made the straw binder into a real quality product, and resulted in a rapid surge in demand for sturdy and robust straw binders from Westphalia. The foundations had been laid for the later success of our company.

1930–1945: Combine harvesters revolutionise harvesting.

Driven by the vision of developing a combine harvester adapted to European harvesting conditions, the youthful company CLAAS developed the first prototypes, and in 1936 unveiled Europe's first fully operational combine harvester to the public: the CLAAS harvesting-threshing binder. A revolution.

1946–1969: CLAAS is the combine harvester specialist.

SUPER, EUROPA and MATADOR are just some of the names that marked the rise of CLAAS as a combine harvester specialist. Again and again, we are the first to bring new and even better products to the market. The same applied to the combines, when the company at a very early stage identified the trend in western European farming towards ever-larger

areas, and served demand with the development of new, powerful models of combines.

1970–2002: We can do more than combine harvesters.

When CLAAS enters the production of forage harvesters and forage harvesting machines, CLAAS becomes a renowned specialist, encompassing the harvest process as a whole.

2003–2013: Everything from one source.

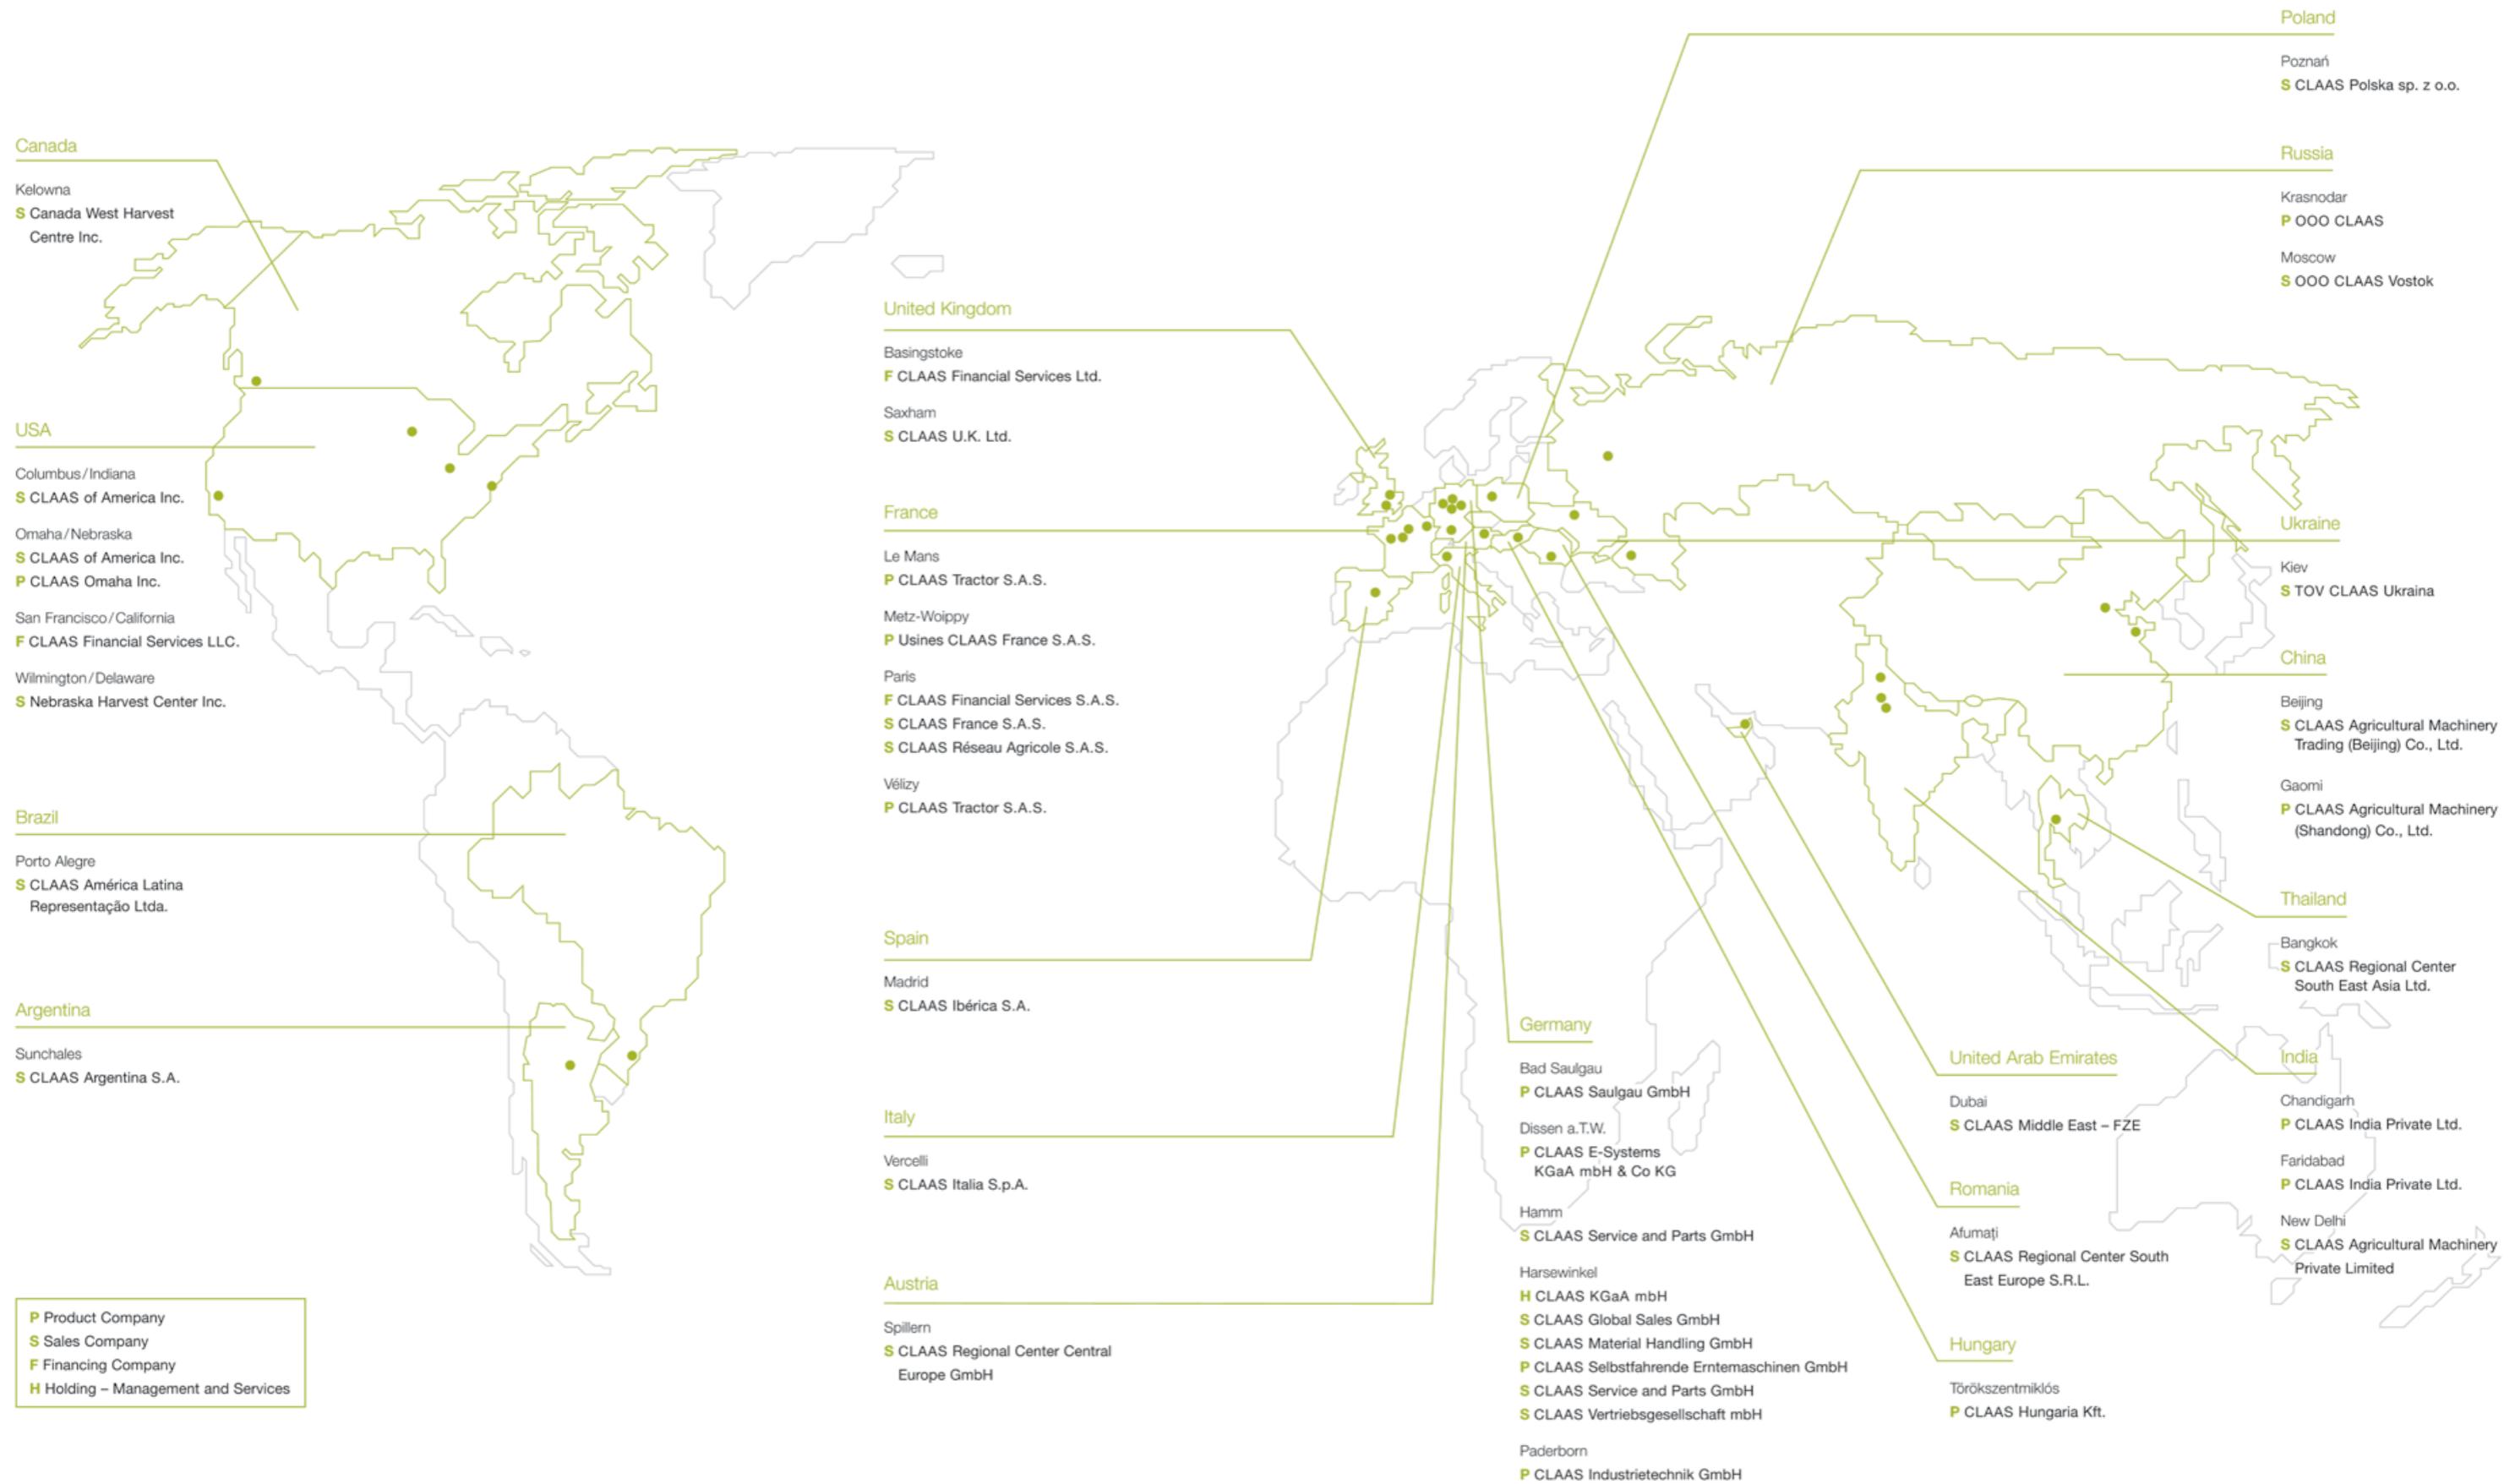

CLAAS takes over Renault Agriculture and expands its product family with a great range of standard tractors. We have been offering solutions for the entire harvesting chain in modern farming ever since. From one source – worldwide. What a fantastic result for the first 100 years.

2014 – Today: Focusing on digital networking.

At CLAAS we know what makes a difference to farmers: Our machines are equipped with smart technology that enables them to communicate with each other and coordinate their work automatically. The resulting demands on electronic systems and related information as well as communication technologies are a crucial issue for CLAAS's future. Our mission: We are actively shaping the development of electronics and software.

Teamwork around the globe.

Our company

Although we are active around the globe and are engaged in worldwide production, we are still a family business. At CLAAS, we have a certain way of thinking and a certain manner that connects us all. We have the same concept of teamwork and of what it means to be able to rely on each other – just like in a big family. “Once you have experienced this, you stay”, is what we hear again and again.

Why is that? Well, maybe it's due to the down-to-earth branch we work in; maybe it's because we have remained a family business up to the present day – with sustainable, dependable values and the desire for continuity and identification.

Perhaps it is the way we treat the people who join us; people who make the very special CLAAS team spirit.

This way or that: employment at CLAAS offers you every opportunity for development you can imagine; long-term and even abroad.

You can expect a range of support programmes from us, exchanges with subsidiaries at home and abroad and many other paths for your personal development. We can offer flexible working time arrangements, part-time or home office models; and activities to promote and sustain well-being and health, of course. In short: everything you need to feel at home with us and to develop further throughout your working life.

We belong to the top 100 most attractive employers in Germany for IT, engineering and business students. And in a study commissioned by german “manager magazin”, we are listed amongst the most attractive German employers for engineers, ranked number 41.

A good breeding ground for good people.

Whoever strives to use their opportunities with conviction has full access to the world of CLAAS, as initiative is what made us great.

You don't need to have grown up on a farm to find your way to the CLAAS family – although this is always a good starting point. However, you should definitely show curiosity and interest, you should want to take on responsibilities, enjoy working abroad and find other cultures' lives exciting. Furthermore, we are always excited about extramural commitment. If you can confirm all of this, it almost doesn't matter what you are studying or have studied, as good people are always what we are looking for. That is why we look forward to welcome students and graduates from nearly all academic fields.

You can show us what you can do. We will show you what we can do in return: we offer you both professional and personal targeted developmental opportunities and support you so that you can actively create and realise your professional aims with us. Write your very own success story with CLAAS.

What we offer as an employer:

- A modern family business where our employees can rely on trust and partnership
- Varied and challenging work in a strong, internationally engaged, innovative company
- Development and further education to determine and achieve professional aims
- Team spirit and a passion for agricultural technology
- A down-to-earth traditional enterprise, which has grown from a family start-up to a global player and has been perfecting agricultural technology in the fields of the world for more than one century
- Market and performance related remuneration
- Stimulating work where professional talents from any background can contribute to feeding the world on a daily basis
- A Coworking Space at our Headquarter in Harsewinkel, Germany for lateral thinkers and reflective minds to give room for creativity and new ways of working and thinking

Ideally, you come from one of the following backgrounds:

Agricultural Business

Agricultural Technology

Agricultural Science

Mathematics

Information Technology

Engineering Information Technology

26

years was the age of August Claas when he announced the foundation of his company in 1913.

43,723

customers, students and school leavers showed an interest in our global production factories last year.

18.2 Mio. €

have been invested last year in the training and development of our employees.

2,802 employees work more than 20 years at CLAAS.

Green practice instead of grey theory.

With CLAAS, you can create the best possible conditions for your future during your studies. We offer students many opportunities to put their theoretical, academic knowledge into direct practice.

There are many challenging tasks and valuable experiences waiting for you in our company's various departments, which will help you to get informed and to advance on your personal career path.

Internship in Germany: gaining experiences for the future.

Every year, more than 600 students complete an internship or a practical semester at CLAAS in all areas of our German company: from R&D, sales or production to all commercial departments. They get to know the structures and processes over three to six months. They experience our company culture as "one of us" and learn how to improve their own performance in a family business with many years of tradition as well as high demands. Take advantage of this opportunity. Look behind the scenes and collect valuable experience for your professional future.

CLAAS sponsors the Initiative Fair Company which supports fair work experience and real chances for university graduates. We promote this initiative as we believe that sustainable success is only possible if our employees are dealt with in a fair way. Our interns value the fact that we have been a family business since 1913, which attaches great value to long-term activities and stability. This gives you great opportunities – with certainty.

In order to promote the exchange from intern to intern, we invite you to the CLAAS StudentTalk once a month. Here you will gain insights into other departments, learn more about CLAAS and get to know your fellow interns.

Job Shadowing.

You want to get insights into our working environment at CLAAS and gain valuable experiences for your future on a single day? Look behind the scenes and use our Job Shadowing to experience the practice for one day.

Compared to an internship, this offer does not focus on the work itself, but in fact on getting to know each other and learn about the workplace.

Final thesis.

CLAAS also is the ideal partner for your final thesis. We are happy to support you in completing your Bachelor's or Master's thesis, and practical or project work. Together with you, we develop a scientific paper that does not simply disappear into a drawer once it's finished, but one that has a concrete use in practice.

Of course we also offer basic and preliminary work experience for students of mechanical engineering.

International internship: experiencing CLAAS worldwide.

CLAAS operates in 140 countries: so why not look outside the box? With an international internship in one of our production or sales enterprises, we give you the opportunity to extend your practical experiences with concrete professional tasks and to strengthen your intercultural competence.

During the internship, you are part of the team, looking over the shoulders of international experts when they are doing their daily work. By learning the correlations in a globally operating enterprise, you can soon evaluate the peculiarities of "your" foreign market.

Of course you also dive into the everyday culture of your host nation and get to know "country and people" – for many of our interns this is an important and often profound experience. This is greatly valued at CLAAS as internationality is a central factor in our work developing young talents.

As many of our employees as possible should gather global experience right from the beginning, should widen their horizons and develop a multi-cultural understanding.

If you are interested in an international internship, please contact the responsible person at the respective national subsidiary. You will find these on our career page: www.claas.jobs. You can also enquire directly about the possibilities of combining internships abroad with your final thesis.

What we would like from our interns:

The ability to communicate

Good academic performance

A sense of responsibility

Openness

Independence

Flexibility

Ability to work in a team

Very good English and IT skills

"My tasks are just as versatile as the systems."

Florian Schulze Sindern is completing his master's degree at South Westphalia University of Applied Sciences in Soest. Before writing his master's thesis, he decided to do an internship – namely with us. Florian is deployed at the department CLAAS Tractor Engineering at our location in Paderborn.

Florian was already well acquainted with CLAAS before his internship. "Before my time in Paderborn, I was on the road in Romania as a trainee as a performing driver during my semester break and wrote a project work at CLAAS", he enjoys reflecting on the time. Therefore, it was an easy decision to go with CLAAS.

During his internship, Florian is an inherent part of the team: "We are a small team which allows uncomplicated and straightforward communication." Current topics are discussed in team meetings on a daily basis. For long-term meetings I meet up with my superiors for a regular appointment that takes

place every two weeks."

CLAAS Tractor S.A.S is the product company of our tractors in France. Here, the machines are developed, tested and produced. The company in Paderborn focuses on drive systems, electro-hydraulic controllers and the software required for that. Together with the team of driving control and advance development in France, competencies are being pooled.

"My department is responsible for the development of CEMOS, a driving assistance system for tractors", Florian describes his department. "My tasks are just as versatile and varied as the system

itself and with the support of colleagues, I quickly found your way and got my own range of duty."

Of course, there are also particularly special moments in the life of a CLAAS trainee. "My highlight so far was an event for the introduction of CEMOS international clients had been invited to. During a two-day workshop, the functions and operation of the system were introduced to the clients. Subsequently, we took them to the field with several tractors to also be able to present the system during field usage." Thus, an internship does not only enable you to establish and extend a CLAAS network in Germany, but also worldwide.

And what's next after the internship? Florian sticks with us after his time as a trainee since he is going to write his master's thesis at and with CLAAS soon.

CLAAS Inside:

Growing together.

As part of your study programme CLAAS Inside, you can expect green practice rather than grey theory – because we allow you to enter CLAAS's workforce whilst still studying. You will get the chance to work on exciting projects and gain valuable experience along the way. All this with peace of mind: We support you by arranging flexible working hours which give you enough time for studying, and with our monthly grants you can easily fund your studies.

How does it work?

Like this: In the course of the semester, on one and a half days a week, you will be in your department gaining valuable experience and be involved in a wide range of activities. Dur-

ing the semester holidays, you join us for longer periods. You will have a dedicated contact from HR as well as in your department to ensure continuous personal guidance. This is also provided when writing your thesis. At regular casual meetings, you can meet and interact with other interns and employees, and expand your CLAAS network.

We regularly advertise places for CLAAS Inside on our Career Portal. Our tip: Subscribe to our digital Job Agent to be kept up to date and informed via mail as soon as a position in your preferred department becomes available.

What we expect from you:

A sense of responsibility

Team spirit

Above average performance in your studies

Customer orientation

Enjoy communicating

Determination

Voluntary commitment

Flexible throughout one's studies.

Responsibility, teamwork and joy – that's what characterises CLAAS Inside to Anne Drewel. The student can optimally combine both: studies and work. Anne directly applies the theoretical knowledge she gains during her studies at CLAAS in practice.

After Anne had completed an internship semester at CLAAS at the department Corporate Marketing, she got the opportunity to remain a part of the team – via CLAAS Inside. "I decided to work at CLAAS, since there is a good working atmosphere here, I can work with a great team and I was considered an adequate team member from the beginning."

And this is how CLAAS Inside works for Anne: "During the semester, I work at the office for one or two days per week. The rest of the week, I can fully concentrate on my studies and attend my lectures and seminars. During the semester break, I work full-time in Harsewinkel. The entire time, I have independent fields of duties to take care of."

Anne studies Technical Management and Marketing at Hamm-Lippstadt University of Applied Sciences. Via CLAAS Inside, she supports the Corporate Marketing department. "The sector Marketing Processes and Systems deals with the implementation and care of different processes and technical systems used in marketing", Anne describes her department.

"My tasks contain cooperation with the central administration and the distribution of product communication data. Furthermore, I support the rollout of a Product Information Management System and take care of the maintenance of marketing and sales-relevant product communication data."

CLAAS Inside is the perfect solution for Anne: "The programme offers me the opportunity to implement and deepen learned content of my studies in practice. Thus, mere theory results in a mixed bag of varying new skills and abilities, since I still work for CLAAS and keep gaining professional experience." Additionally, she has a regular income to finance her studies.

Another reason why Anne recommends CLAAS as an employer to her fellow students, is the strong internationality. "For those who would like to work abroad sometime, CLAAS offers great perspectives", Anne summarises.

Support talent.

We attach huge importance to offering the best possible support to outstanding students on their career path. Well-trained and dedicated students are the innovative and globally thinking new talents for the future after all.

CLAAS supports students from various universities and courses of study as part of diverse scholarship and support programmes. Moreover, CLAAS supports foreign students and graduates of all nationalities with the scholarship and support programme for foreign students (STIBET III). Alongside financial support, promoting intrinsic values is a matter close to our heart. This is why we provide every scholarship holder with a mentor who guides and advises them on professional, future and career issues.

By supporting you in your future career with our loyalty programme, staying in contact with you, and growing together.

The prerequisite for this is an already completed internship for at least three months as part of your bachelor or master's degree at CLAAS. You're not able to apply directly. The nomination is based on the personal recommendation of your supervisor. Then those that perform to a high standard earn themselves the best support – within our CLAAS Next Generation.

So: convince us during your internship with CLAAS, and become part of our Next Generation!

Wir fördern das

CLAAS Next Generation: Will you be part of it?

High-performing and qualified interns should benefit on a long-term basis from their time at CLAAS and should keep in touch with us even after completing their internship. Even, if they don't get started after their studies at CLAAS, but gaining experiences in other companies. Thus, we have launched the CLAAS Next Generation as an exclusive loyalty programme to accompany the strongest talents.

As part of the programme, we give you the opportunity to stay in continuous touch with CLAAS. Through the loyalty programme you will still get exclusive information from around the CLAAS working environment, even after your time with us has ended. For example, you will still receive our employee magazine as well as a regular CLAAS Next Generation newsletter. Moreover, we invite you to visit us and take part in our exciting workshops and lectures. In this way, you are able to build and expand your network at CLAAS.

So why all of this at CLAAS? Well, as Helmut Claas, Chairman of the Shareholders' Committee, has always said, We don't have a secret, just good ideas and motivated people. And what is the best way to motivate you?

Both sides profit.

We also profit from contact with promising talents, and are looking forward to maybe greeting you again one day as "Claasiens". This was the case for Elli Kremel.

From an internship to the CLAAS Next Generation and finally to the career start. Elli took this career path at CLAAS. First, she completed her six-month internship in the Digitalization and Processes division of CLAAS Global Sales. There she gathered

Find talent.

CLAAS has active commitments in higher education institutions across Germany in order to establish contact with talents at an early stage, but also to promote the transfer of knowledge and technology. This is a matter of tradition for our company: approximately 80 years ago, the founder of our company August Claas initiated the first cooperation with a higher education establishment. Since then, we have grown to become the largest family-run company within the agricultural technology branch, and our collaborations with higher education establishments serve equally for knowledge transfer and the promotion of young businesspeople. Should you be interested in a collaboration or cooperation, in practical projects or seminars, in sponsoring, scholarship programmes or talent programmes, please contact our Talent & University Relationship Management.

E-Mail: hochschulmanagement@claas.com

valuable experience which she was then able to utilise on returning to her studies. The department in which she was active during her internship was sure that they wanted to remain in contact with Elli over and above her internship. Therefore, she was accepted into the intern loyalty programme. "I maintained contact with CLAAS even whilst writing my bachelor thesis, and found the intensive contact useful for interviews and dialogues with experts", says Elli. "I also gratefully accepted CLAAS' offer to take over the printing costs for my thesis".

After completion of her studies, we spoke to Elli about a vacant position in her former department. The Digitalization and Processes department deals

with the continuous improvement of existing processes in Sales and Service. Furthermore, this division promotes the integration of our processes into those of our customers. "I benefited a lot from being part of the CLAAS Next Generation. Not just due to my direct entry into vocational life, but also at a personal level through contacts with many exceptional talents and networking events".

In Elli's case, everything worked perfectly. "When recruiting, I regularly make use of the CLAAS Next Generation talent pool in order to maintain contact with excellent former interns and to approach these directly as soon as an appropriate position fitting their profile

comes up", says Sebastian Henke, HR Manager CLAAS Global Sales.

A profit for both sides. Elli is now a permanent part of the CLAAS Team. And what about you?

Starting at CLAAS means you have arrived.

Graduates at CLAAS

Highly motivated new talents who love high-tech machines just as much as international challenges find the perfect job start opportunities at CLAAS after their studies. Join us on your career path – a path laid on certain and fertile ground where you can grow.

International Trainee Programme: discover the opportunities.

International Trainee Programme

"Appreciation at all hierarchy levels."

Florian Werner is one of our International Trainees at CLAAS. After his master's programme Electrical Engineering and Information Engineering, Florian decided to attend the Trainee Programme with the focus on Software & Electronics at our location in Dissen.

"As a trainee, I get the opportunity to intensely get to know the corporate structure and culture as well as various functional areas and departments", according to Florian.

Currently, he is in Paris at CLAAS Tractor S.A.S in the sector Service Electronic Electricity Diagnoses. There he works on the development of software architectures as well as their implementation and analysis, for example. "The worldwide locations and various projects enable me to gain social, intercultural, functional and methodological competence."

And why CLAAS? "To me, CLAAS represents highest quality, innovative strength and internationality. These characteristics, combined with a family-run business, the open corporation culture and the diversity of products, convinced me of CLAAS."

Florian decided to go for the Trainee Programme because intense further education via intense coachings and advanced training was important to him. At regular appointments with his mentor, he can talk about current projects, progress and possible obstacles. "But all within a very relaxed setting with an

The International Trainee Programme is a fixed part of the CLAAS talent support, with the aim of training potential managers and creating the best conditions for your personal career. CLAAS supports you in developing an international network and gaining an overview of the CLAAS Group at the same time.

The only thing that is fixed at the beginning of the programme is its duration: 18 months overall with six months spent abroad. It can be a full six month stay or divided between two different places. You decide on everything else with the HR department and you will be advised and accompanied by an experienced mentor throughout your trainee period. We also support you with a tailor-made development programme.

Entry to the International Trainee Programme is possible throughout the whole year – with the following focuses depending on what is available:

- Engineering (Production, R&D or Supply Chain Management)
- Software & Electronics
- Sales (Technical Sales)
- Finance/Controlling

We count on you in the long term. You will therefore receive a permanent employment contract when you start your Trainee Programme.

What we expect from you:

**Openness and interest
in other cultures**

Very good English skills
Further foreign language skills if possible

Voluntary commitment

Dedication

Not only are our machines are outstanding – we are too:

espresso or a walk after lunch", the trainee reports about his cooperation with his personal mentor.

After graduating from his studies, the access to a professional life via the Trainee Programme was the "exact right thing" for Florian. "There is no better way to get to know CLAAS so intensely, product-spanning and internationally."

During his time at CLAAS, Florian has already experienced a lot – but one event particularly shaped him: "I had the opportunity to present my project results to the CEO of CLAAS and the

Managing Director of CLAAS E-Systems and receive feedback on my results. This appreciation at all hierarchy levels and the intense exchange make up a good portion of the fantastic company culture at CLAAS."

Direct entry: more than just a first job.

You have gained your university degree. The next decisive step now lies ahead: to find a breeding ground for your personal success story and a company that offers you new challenges and varied perspectives – the perfect career start.

We have just the thing for you: direct entry at CLAAS. You will find the perfect conditions for your professional future in our international environment. High-tech machines, team spirit and passion, as well as plenty of freedom for your own creativity and thoughts await.

Excellent conditions for a long-term career – and others think so too:

The familiar CLAAS corporate culture and our extensive training help you to make full use of your career options from the very beginning. CLAAS is the perfect company for a career start: large enough to develop your interests as a new starter at professional or international level but clearly structured enough to quickly recognise your own tasks in the general context.

Please visit our career page, www.claas.jobs, for more information on your direct entry and current job offers.

"Responsibility for your own topics."

Graduating from university and then really getting started. That's what Andreas Danz did. After his master's studies of Economics Engineering at Karlsruhe Institute of Technology, he decided to go for a direct entry at CLAAS. Thus, he did the exact right thing for himself, since Andreas is given many new possibilities.

Before his direct entry, Andreas had already been in touch with CLAAS: He had interned in France and Germany and moreover written his master's thesis at our production network department. "It was clear to me that the products, the company culture and the colleagues at CLAAS exactly met my ideas of an attractive employer. Based on the nine months as a student at the company, I precisely knew what to expect." Andreas appreciates about his direct entry that he could take over responsibilities for his own topics from day one, thus bringing forth projects independently and in the long run.

The fact that his future employer is internationally positioned, was particularly important to Andreas. So much the better, he is on the road a lot for his current job. "It was clear to me that I wanted to work in an environment of international production. I'm especially pleased with the cooperation with the colleagues at our international locations, such as Hungary, Russia, China, India and the USA."

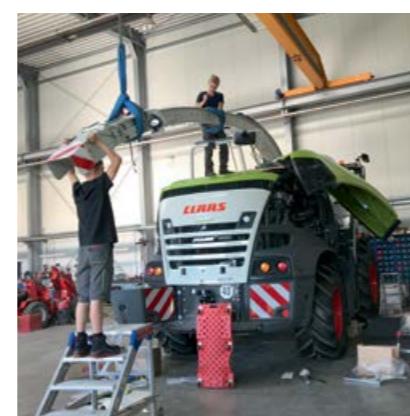

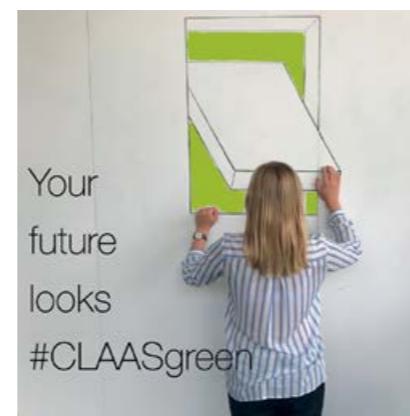

Andreas works as a coordinator of methods at the department Manufacturing Engineering. "Being part of the international production for harvesters at CLAAS, the department I work for is the intersection between development and production and it is responsible for the industrialisation of products at six different locations", Andreas describes his department.

"I myself am currently working on a project about global ramp-up management and related qualification measures, such as trainings. I am engaged in figuring out how to implement product and component ramp-ups even better and faster at our plants in the future."

And Andreas also has one tip for everybody who is interested in a direct entry at CLAAS: "I can only recommend everybody to already get to know CLAAS better during their studies. There are for example many exciting possibilities to do an internship abroad."

Join our fields!

Apply through our E-Recruiting system on our Jobs & Careers page under employment opportunities and follow your application progress online at any time. If there is currently no suitable vacancy for you, activate your personal, digital job agent. It automatically notifies you via mail when we have a new vacancy that matches your search criteria.
